

PRESS RELEASE

CONRAC showcases their latest generation of Narrow Bezel Displays

First choice for any digital signage application: Whether for the countless applications in retail and advertising, for shop-windows, videoconferencing or control rooms, whether used stand-alone or in clusters, the sleek design and superior performance of the displays is certainly convincing.

The slim bezel design makes the displays ideally suited for cluster solutions and video walls. An application long waited for can now be realised: Display walls using large flat screens with near to no disturbing frame in between. There is no limit to design ideas – landscape, portrait or combinations of both in clusters – everything is possible.

For quick and easy mounting, the displays are, of course, VESA compatible.

To seize the compatibility with any digital signage software on the market, there are various different electronic options to be chosen from.

A **pioneering new feature** has been added to CONRAC's Narrow Bezel Displays. Especially for displays installed in large networks "**Display Performance Monitoring**" (cDPM) is a key feature.

Despite the almost frameless design a special sensor has been integrated in the front bezel. This sensor continuously monitors the TFT panel's function (backlight, inverter, power supply and interface). Any malfunction is immediately detected and reported giving total control over all screens connected.

To ensure optimal contrast ratio, excellent image performance and colour saturation as well as superior legibility from all angles even in sunny spots, CONRAC's Narrow Bezel Displays are available with **sunlight readable panels**.

It goes without saying that CONRAC's cTEC features have been implemented in the Narrow Bezel series. These features and functions stand for maximal product lifetime, trouble-free operation and a reduced cost of ownership.

About CONRAC:

CONRAC GmbH, founded in 1956, is one of the leading manufacturers of displays for public information. Ever since the 1960s, CONRAC is active in the public information business. Especially in the airport sector CONRAC is a very well recognized name. Installations in more than 200 airports clearly demonstrate the company's expertise in the system business. Complementing the range of "Public Displays" for indoor as well as outdoor applications are displays for digital advertising and for special industrial applications such as medical imaging, radar and navigation.
