DISPLAY GIANTS

Extra large LCD/TFT boards in landscape and portrait format

Conrac introduces a huge Outdoor Display for Public Transport Applications featuring a screen diagonal of 82 inches (208 cm). First units have already been delivered, the latest of these installations was at Copenhagen's main station where the large screen display is used as departure board, installed in portrait format. Further installations are presently in progress.

The possibility of using mega-large screens not only in the usual landscape, but also in portrait mode allows even more creativity regarding the information to be displayed making them the ideal solution as a replacement of the conventional information boards. With its full HDTV resolution and a very crisp and bright image, the layout options are almost unlimited. Additional information such as graphics or film/video clips can be added to the actual travel information, both for information purposes as well as e.g. for advertising or infotainment. With a high contrast ratio of and brightness level the huge flat panel display provides a premium picture quality on active screen dimensions of as much as 1,81m x 1,02m!

Same as Conrac's smaller Outdoor Displays, the 6982 PD has a robust aluminium cabinet with laminated safety glass panel and IP54 protection ideally suited for public environment. Different configurations, with or without industrial PC, etc. can be realised. Summarized as "cTEC" (Conrac Technology), several features enhancing the life-time of the displays have been implemented. Examples are cALC (Ambient Light Control), cDCC (Dynamic Contrast Control), cPXS (Pixel Shifting), cDPR (Dynamic Pixel Refreshing) to name just a few. Further products on display will be a 46 inch Outdoor Display, a 57 inch Public Display and a 23 inch display for onboard applications in trains or busses.
